G - FORCE HELMET

Lightness. _____ Comfort. _____ Innovation.

The new G-Force helmet from NVolo Helicom was designed for helicopter pilots, with the aim of combining comfort and innovation. Thanks to its carbon composition, the weight of the helmet is significantly reduced, guaranteeing the rider who wears it maximum safety and improving the operator's quality of life in the long term. In fact, the attention to lightness is due to the fact that the operator is exposed to the weight of the helmet for many hours a day which, multiplied by years, can cause health problems.

- Accessories:**
- **fireproof and breathable** interior padding
 - **maxillofacial** protection
 - possibility to connect the **oxygen mask**
 - possibility of installing **Bose A30** headset
 - visors operated via **two separated mechanisms**
 - possibility of installing **integrated Bluetooth**
 - compatibility with **MSA Gallet mount** with NATO Nexus
 - double visor with **commands on both sides**

DESIGNED TO IMPROVE PILOTS HEALTH

Integrated Bluetooth

Compatibility with Bose A30 headset

Double visor with double control

DOUBLE CERTIFICATION

- DOI/USFS Aviation Helmet Standard

- EN966:2012+A1:2012

Available sizes: **from S to XL**

Lightness and comfort. A strong point of the new G-Force helmet is the weight, of approximately 1,100kg. Furthermore, the shape of the helmet is designed to compensate the weight of the NVG at the front. This allows the installation of the viewer and battery pack, limiting the addition of additional weight to the rear and avoiding damage to the cervical area from prolonged use.

Innovation. The new G-Force helmet is an innovative product, with which we want to satisfy the most common requests of helicopter pilots. It features a fireproof interior, making the helmet suitable for any environment. It is possible to install a maxillofacial protection or an oxygen mask. There are two options for the visor cover: one compatible with the MSA quick attachment for the NVG, one with the fixed attachment for the NVG.

Technical Features:

- microphone boom with two options: **metal boom** or **flexible boom**
- switch for **dynamic/electret microphone**
- switch for **high/low impedance**
- **volume adjustment** on the helmet
- **smooth or coiled** NATO Nexus TP-120/U-174 cable
- ventilation holes
- visors with **anti-scratch** and **anti-fog** treatment.
- Available colors: transparent, blue, light smoke, dark smoke, yellow
- double visor with **double mechanism**, operable from both sides

Bluetooth Features:

- **integrated Bluetooth** with priority of incoming radio communications
- **Bluetooth volume adjustment** on the helmet
- **rechargeable Bluetooth battery** with NATO Nexus TP-120/U-174 cable
