G-FORCE HELMET

G-FORCE

Helicopter pilots helmet with EN966:2012+A1:2012 certification. The standard configuration includes the dark smoke visor and the other one can be chosen between orange or transparent, plain visor cover or compatible with plate for NVG mount, NVolo Helicom communication system integrated.

Cod.: GF_HELI

VARIANTS

The Helicom BT headset can be integrated into the G-Force helmet, allowing a wireless connection with your mobile phone. Thanks to its integration into the helmet, this communication system does not require the use of an external controller, but it will be possible to manage communications using a multifunction button. With one click on the multifunction button, it is possible to accept an incoming call, while with two clicks it is possible to reject an incoming call or end the call in progress. During a phone call, the operator is always connected to the on-board intercom, having full management of listening, but excluding himself with the microphone from communications. By holding down the multifunction button, the operator can communicate with the on-board crew, excluding himself again when the button is released.

Cod.: GF_BT

BOSE

The G-Force is also compatible with Bose A30 headphones, to obtain a helmet equipped with an ANR communication system.
